

Constant A_χ : does length remain observable?

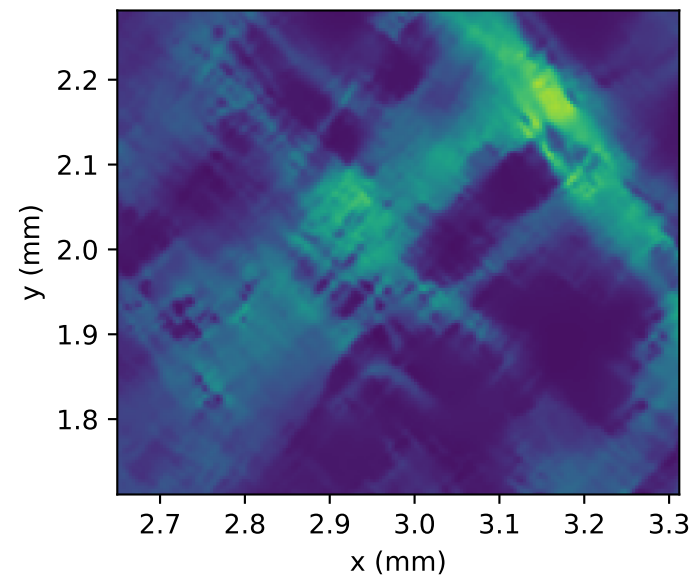

DIC total equivalent strain

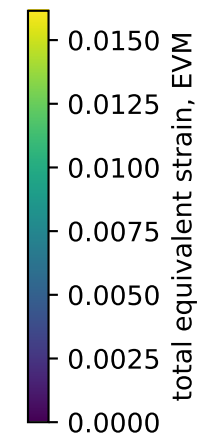

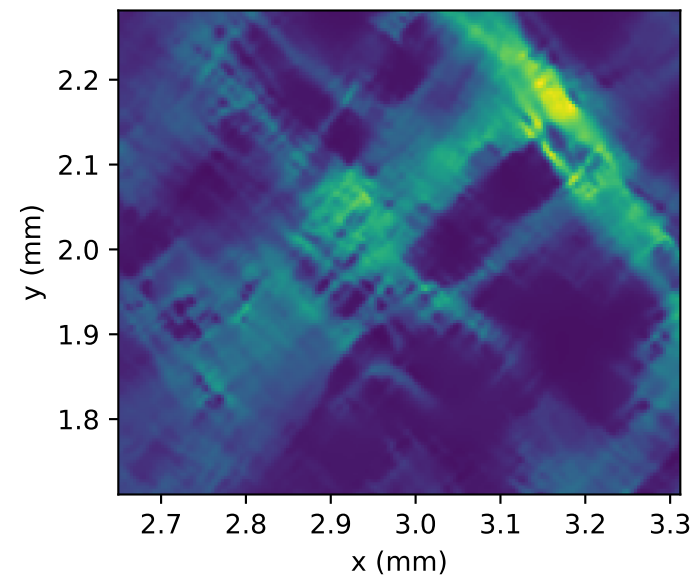

$\ell = 20 \text{ } \mu\text{m}$, $\alpha = 6$
 $r=0.536$, $L2=0.479$

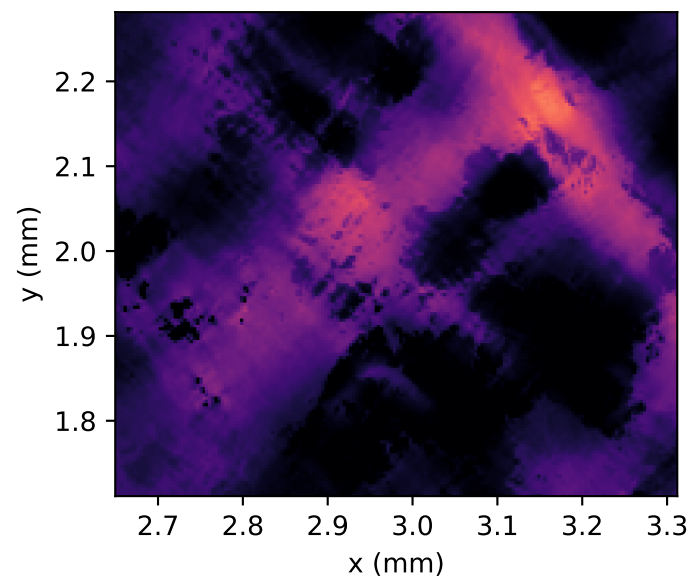

$\ell = 30 \text{ } \mu\text{m}$, $\alpha = 2.66667$
 $r=0.517$, $L2=0.523$

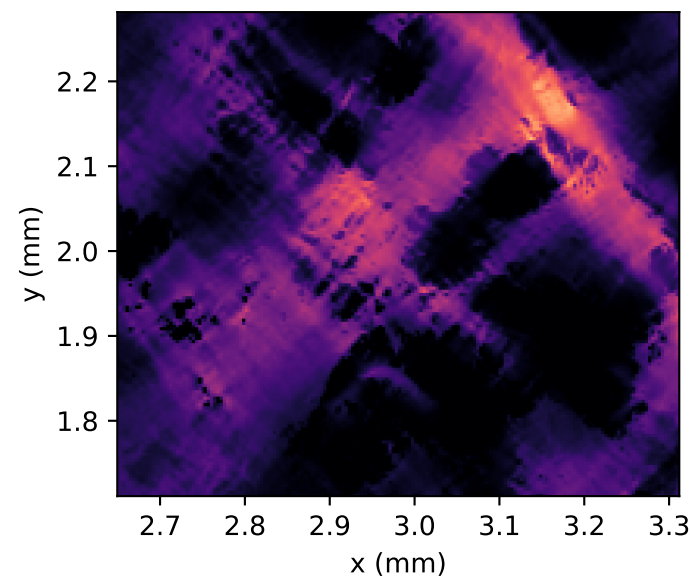

$\ell = 40 \text{ } \mu\text{m}$, $\alpha = 1.5$
 $r=0.501$, $L2=0.568$

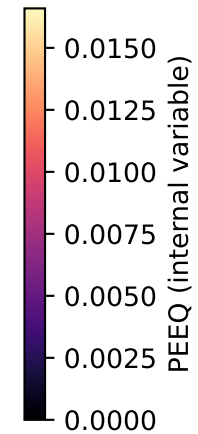

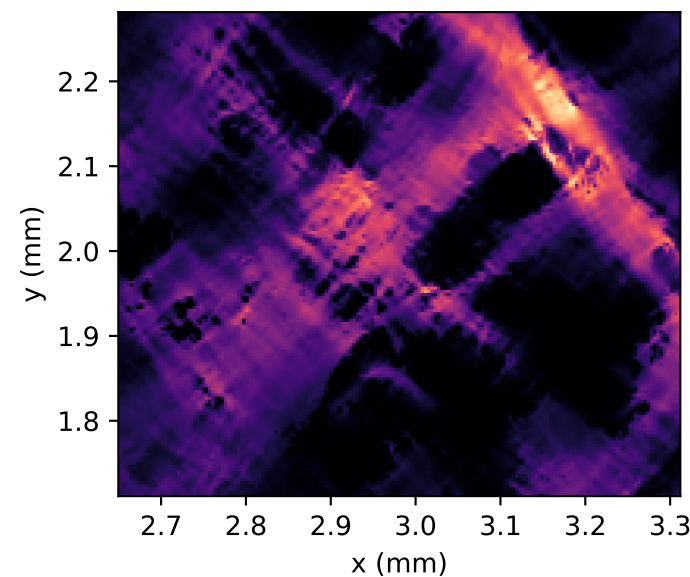

PEEQ, max=0.0120
band width=0.1248 mm

PEEQ, max=0.0141
band width=0.1184 mm

PEEQ, max=0.0166
band width=0.1193 mm

F1 reduced coupled mechanics
Raw EVM from displacement
PEEQ is an internal variable
No post-filtering
